Subject: Maldives Guest Information System (MGIS)

MIRA is pleased to announce the launch of the Maldives Guest Information System (MGIS) on 1 October 2026.

MGIS is the centralized digital platform developed by MIRA to facilitate the collection and reporting of guest-related information required for the administration of Green Tax. The system is designed to support tourist establishments in maintaining guest records and streamlining their reporting obligations. MGIS has been developed to integrate with taxpayers' existing Guest Management Systems through a secure Application Programming Interface (API), enabling the automatic transmission of guest data. This will replace the current manual process of uploading guest information sheets through MIRACONNECT when filing Green Tax returns, resulting in a more seamless and efficient Green Tax return filing experience.

From today onwards, persons registered for Green Tax are encouraged to use MGIS to manage and submit guest information.

While the use of MGIS is not currently mandatory, MIRA intends to gradually introduce mandatory use of the system in the near future. Adequate notice will be provided before any such requirement takes effect.

MGIS may also be used as a standalone guest management solution. Tourist establishments that do not currently have their own Guest Management System may use MGIS to record, manage and maintain guest information directly within the platform.
